

Replacement Connector for LL916C & LL916H

The Lubell LL916C and LL916H portable underwater speakers come hardwired with 25', 50', or 100' water-blocked cables, fitted with a Conxall Multi-Con-X 3182-3PG-524 3-pin circular connector. This proprietary connector mates with the Conxall 4182-3SG-300 3-socket connector found on the required Lubell AC102, AC202C, AC203E, AC205C, and AC211 series isolation and matching transformer boxes and splitters.

If the Conxall 3182-3PG-524 connector on your LL916 requires replacement, you can either return the speaker to Lubell Labs for replacement (about \$40), or order replacement connector from Lubell Labs (\$19 shipped) and have a local electronics technician install / solder the connector, being careful to follow the pin assignments called out in diagram below. Connector can also be purchased from electronics vendors including Mouser, Digikey, and Allied electronics.
